

# “FOOD DELIVERY WEBSITE

## Task - 4

## Your Project Name

▪ Fully describe the online food ordering system. The main objective of the system is to manage the details of food items, Category, order, confirm order.

|            | Name               | Batch |
|------------|--------------------|-------|
| 2129a41123 | ARIVAZHAGHAN.<br>P | A41   |
| 2129a41124 | ARPUTHAM.G.P       | A41   |
| 2129a41125 | ASMA ZAREEN.A      | A41   |
| 2129a41126 | AVINASH.V          | A41   |

## Task 4 :: Backend (Module 4)

### Do database modelling and create models

- Design schema for all the data to be stored
- Start mongodb local server and point the backend to the server
- Create mongoose schema at the backend
- Run test queries to set up the database

### Create Various APIs to ensure data flow within the website

- Define all the routes for the backend
- Add authentication middleware
- Add controllers for all the paths to handle api request
- Create Environment variables for all authentication keys
- Note: Always handle all possible cases with the request

### Evaluation Metric:

100% Completion of the above tasks

## Learning outcome

- Understanding Nosql databases modeling
- Querying and filtering mongodb
- Understanding various req methods
- Getting familiar with cookies
- Server side authentication

## Step-Wise Description

Food delivery is a courier service in which stores, restaurants, or third-party applications delivers food to consumers on demand. These days, orders are executed through mobile apps, websites or via telephone. Deliveries include cooked dishes as well as groceries from supermarkets.

## Summary of your task

Online food delivery is a service that provides a digital platform for customers to purchase food online via a website or application. As per the food delivery industry overview, these platforms make the process of food ordering convenient and easy by registering and managing accounts of their customers.
